**Subject:** Dimock Residential GW Site Preliminary Results

Preliminary results for the Dimock Residential GW Site are included in the attachment. Included are results on the priority constituents from all labs, where available. Level of certainty is provided when results are above screening levels.

Updates

For samples collected 1/23 - 1/26 prelims have been submitted except for a few micro results. Note: HW01 was not shipped to R9 for dissolved gases.

Results at or above screening levels (updates since 2/3):

Methane: One preliminary result is above the screening level for methane (HW12). This sample was re-analyzed and a new result is included in the table.

Coliform bacteria: Three results are above the screening level for coliform (HW02, HW08a, HW35). These results are preliminary and will be validated once data packages are received.

Report Files:

A separate email will follow with final reports that have been placed on the R03FTPUser site in directory EPA Laboratory.

Please contact me at 410/305-2732, or Robin Costas 410/305-2659, if you experience delivery problems with this report. A copy of this e-mail will be retained in the case file.
